

1800W LED Driver Software User Manual

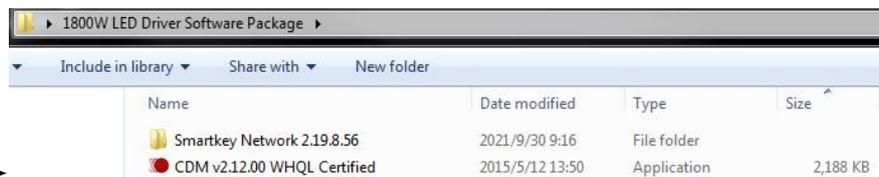

The driver own DALI and DMX interface, *default mode is DMX.*

User could switch mode by MOONS' software. Output current value is different in DALI and DMX mode. Recommend to remove LED lamps during programming driver stage. During programming, the driver should be electrified.

Software Package List

→decompressing file→

A screenshot of a Windows File Explorer window titled "1800W LED Driver Software Package". The window shows a list of items in a table format. The table has columns for Name, Date modified, Type, and Size. There are two items listed: "Smartkey Network 2.19.8.56" (File folder, 2021/9/30 9:16) and "CDM v2.12.00 WHQL Certified" (Application, 2015/5/12 13:50, 2,188 KB).

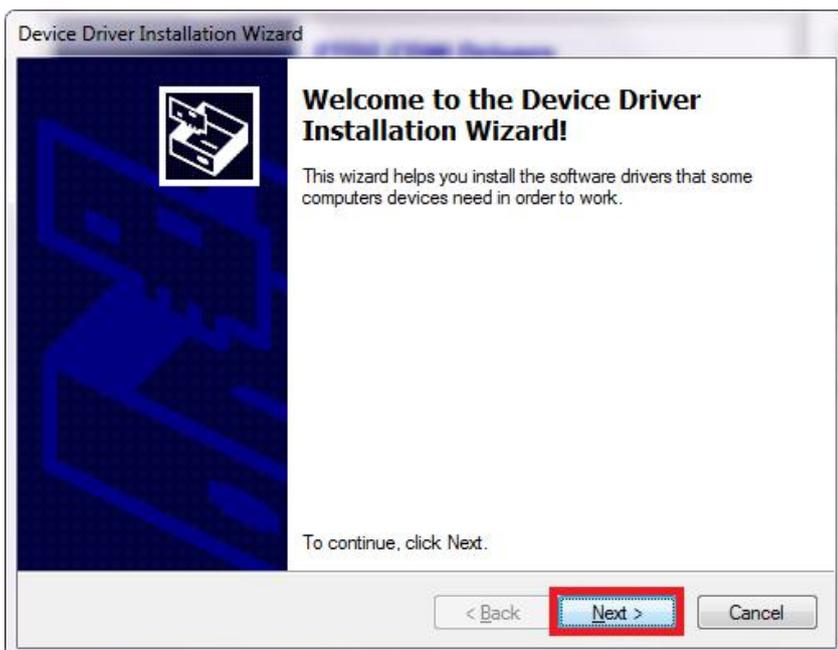

Name	Date modified	Type	Size
Smartkey Network 2.19.8.56	2021/9/30 9:16	File folder	
CDM v2.12.00 WHQL Certified	2015/5/12 13:50	Application	2,188 KB

Main Steps:

1. Install programmer's USB driver
2. Complete hardware wiring
3. As DMX driver
DMX programming interface and explanation, program driver under DMX mode
4. Switch DMX mode to DALI mode
5. As DALI driver
DALI programming interface and explanation, program driver under DALI mode

1. Install Programmer's USB driver

Operate "CDM v2.12.00 WHQL Certified" as administrator.

Device Driver Installation Wizard

Completing the Device Driver Installation Wizard

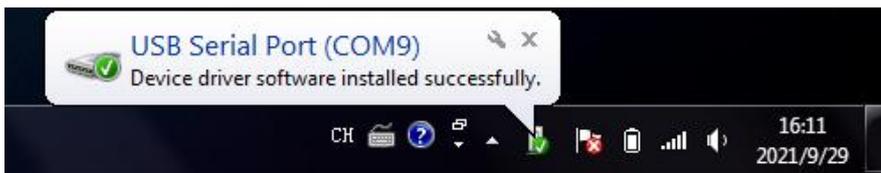

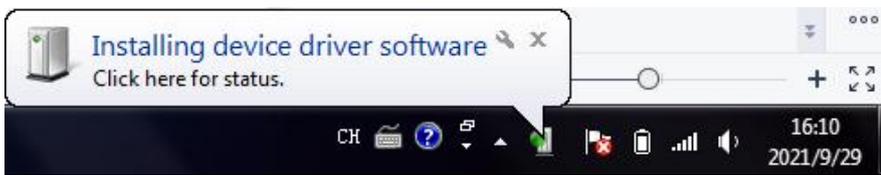

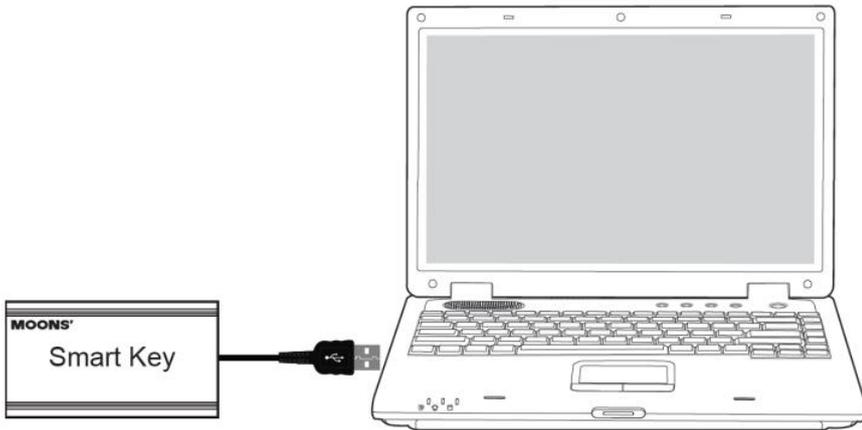

The drivers were successfully installed on this computer.

You can now connect your device to this computer. If your device came with instructions, please read them first.

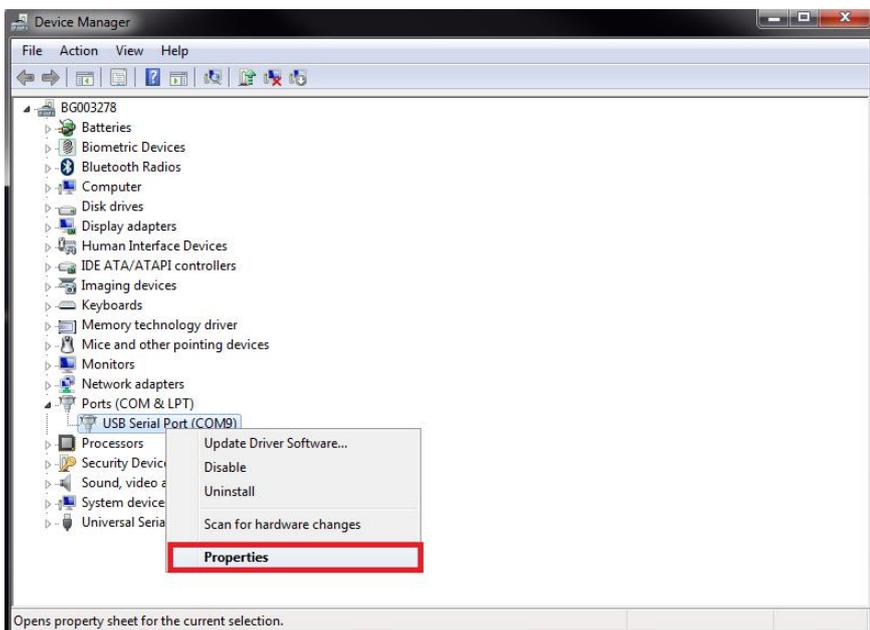

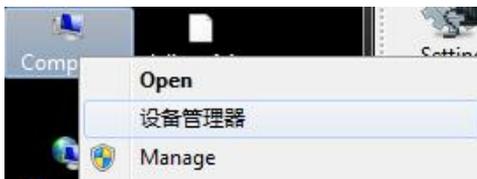

Driver Name	Status
✓ FTDI CDM Driver Packa...	Ready to use
✓ FTDI CDM Driver Packa...	Ready to use

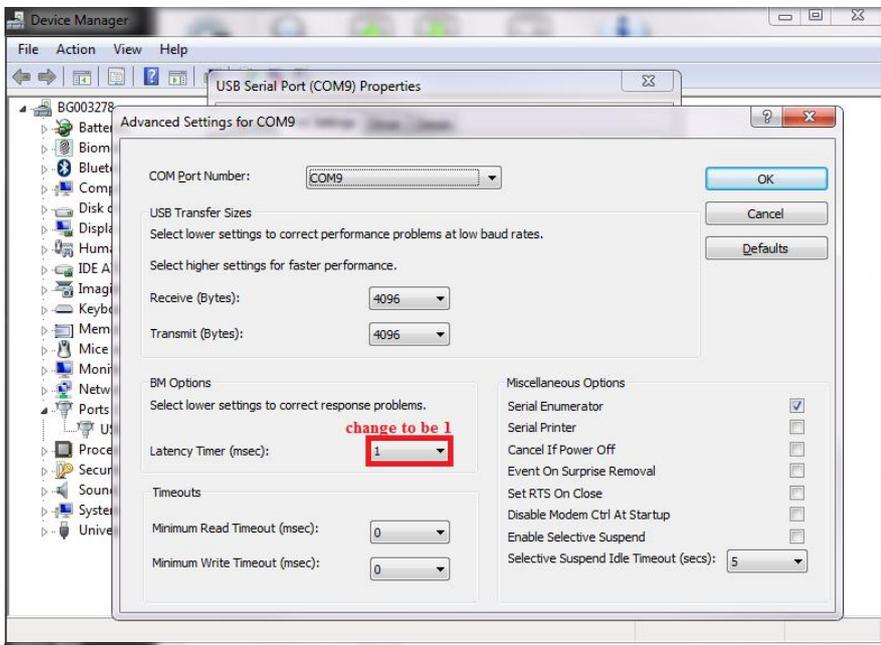

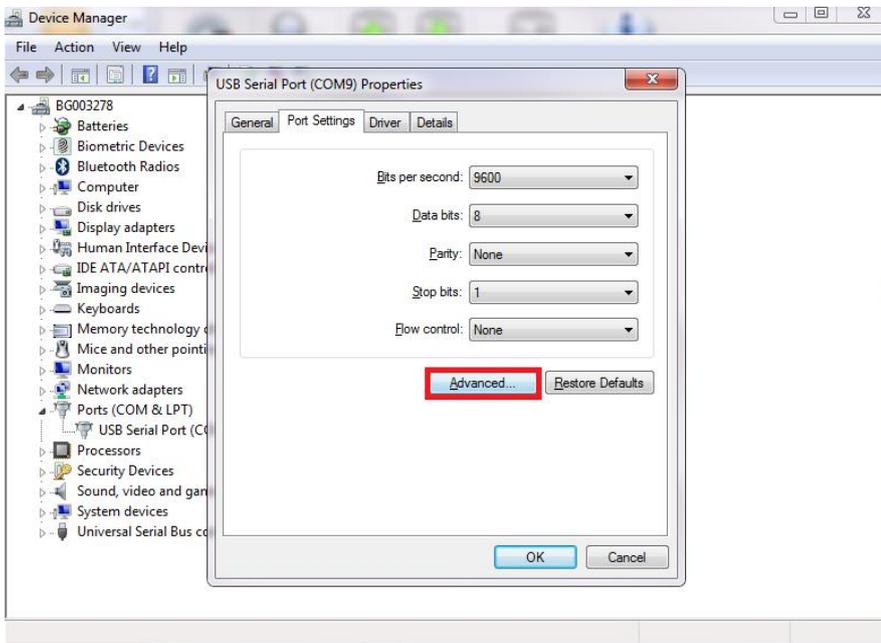

< Back Finish Cancel

When programmer connect to PC's USB port, PC will cost few seconds to recognize programmer's port number.

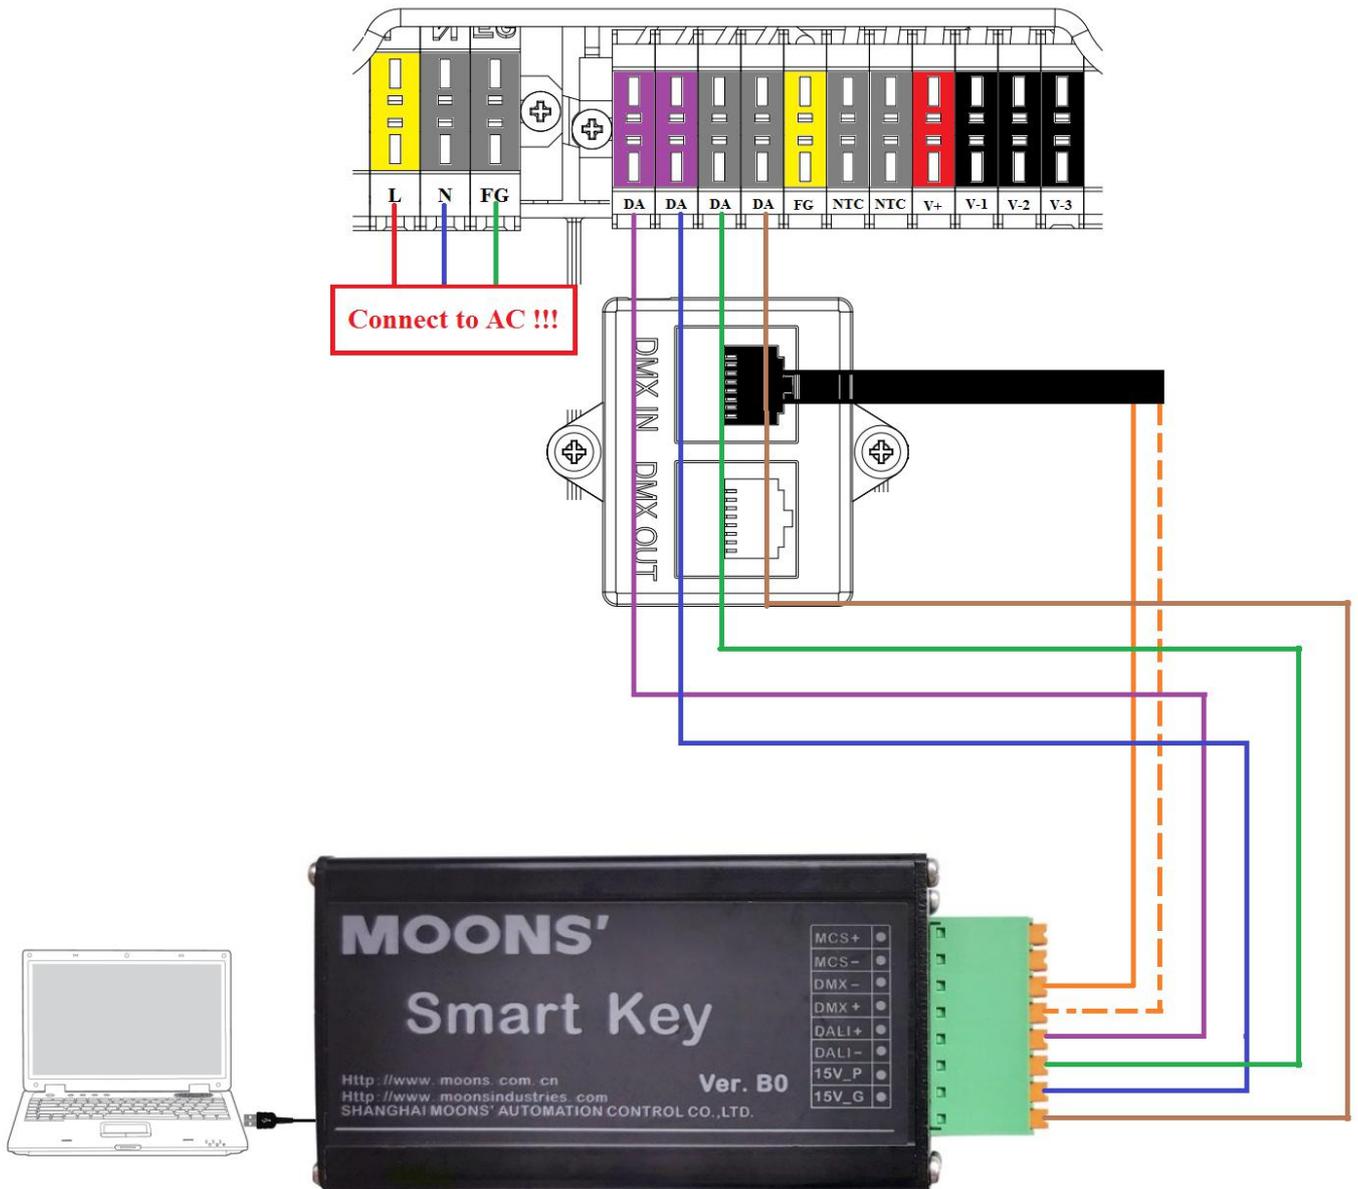

Next please enter computer manage device

And then click OK to save.

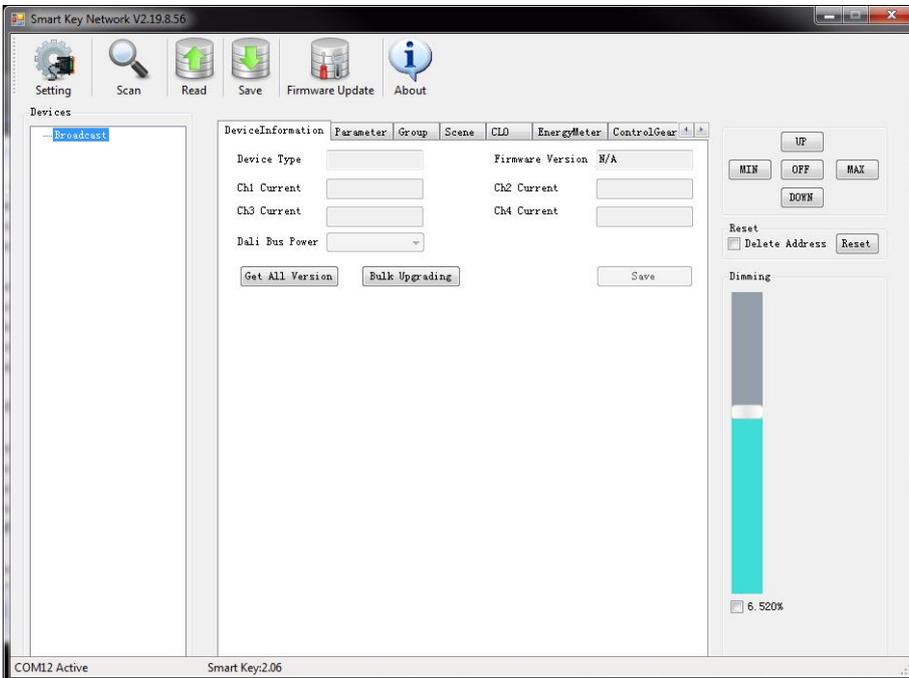

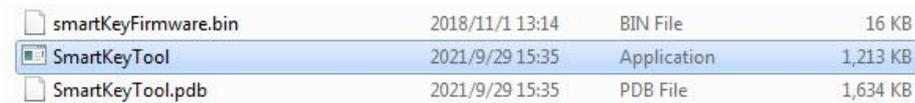

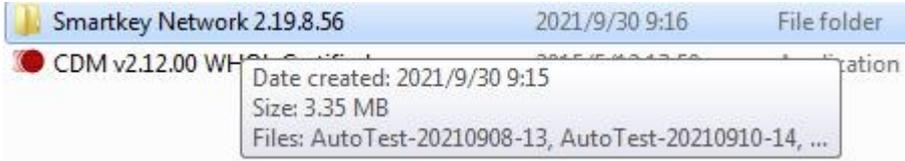

2. Complete Hardware Wiring

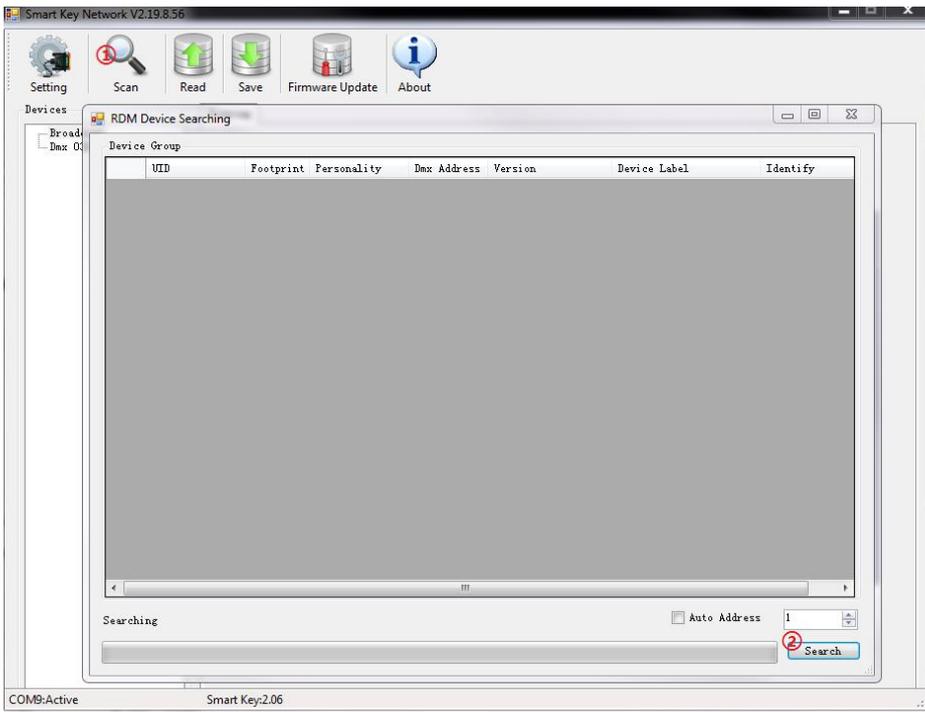

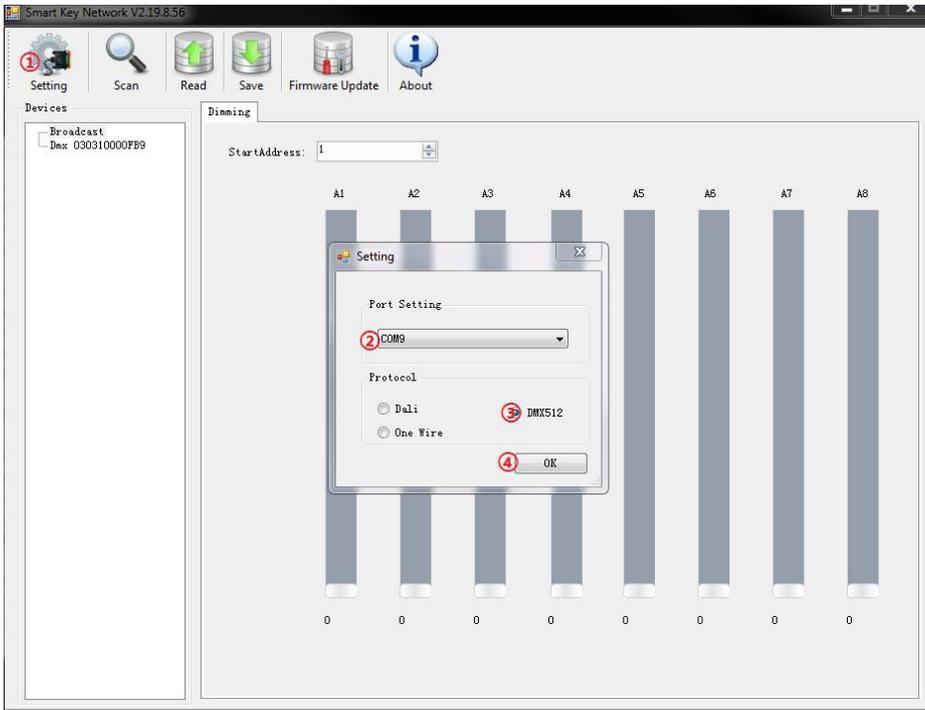

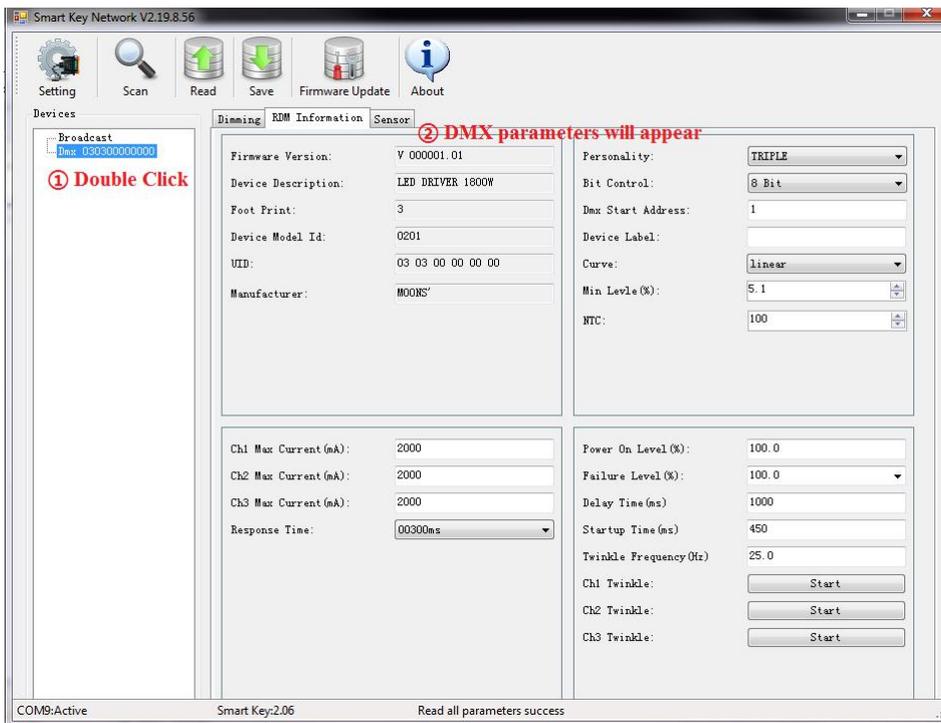

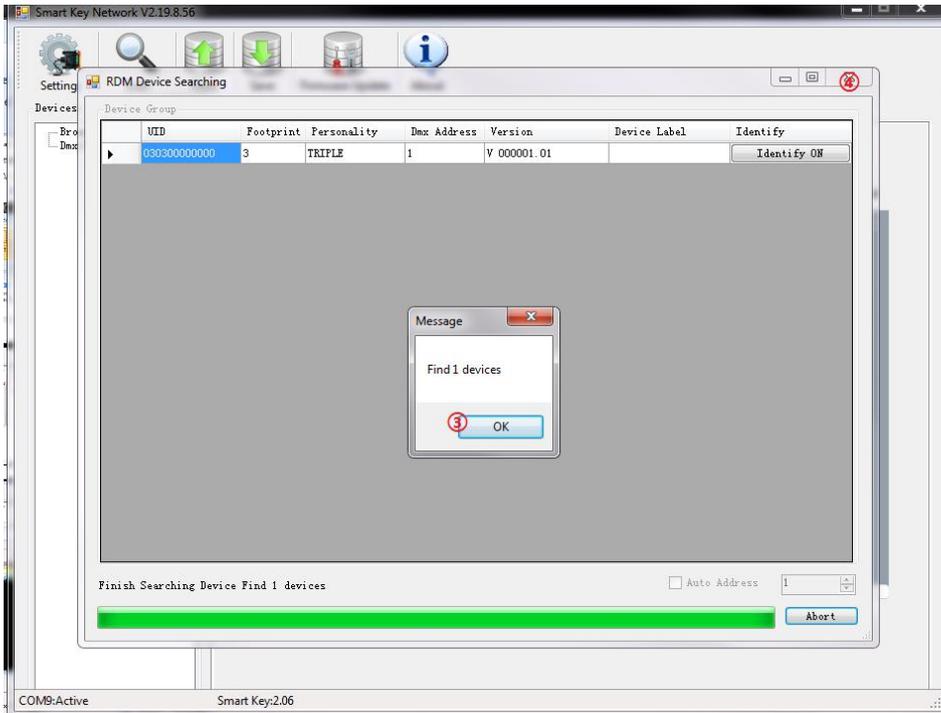

3. As DMX driver

DMX programming interface, explanation and program driver under DMX mode

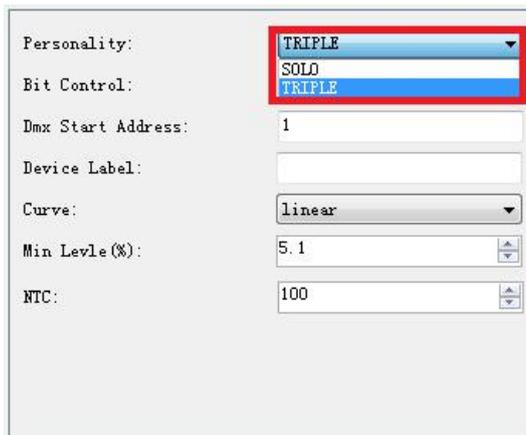

Operate the software directly.

As DMX driver, this driver has two address modes.

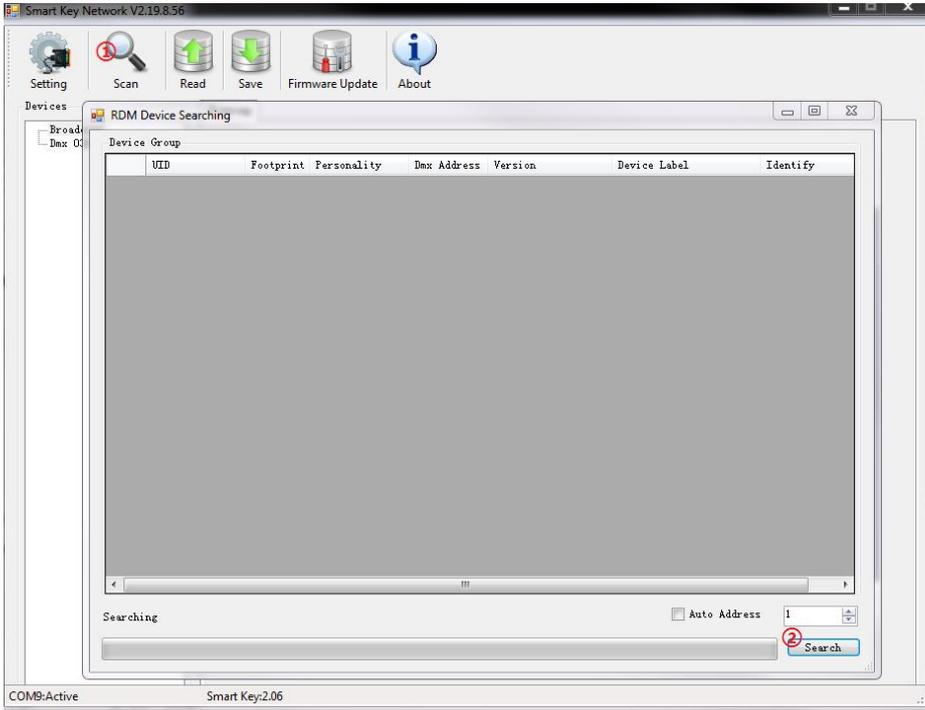

Solo: three output channels share one DMX address.

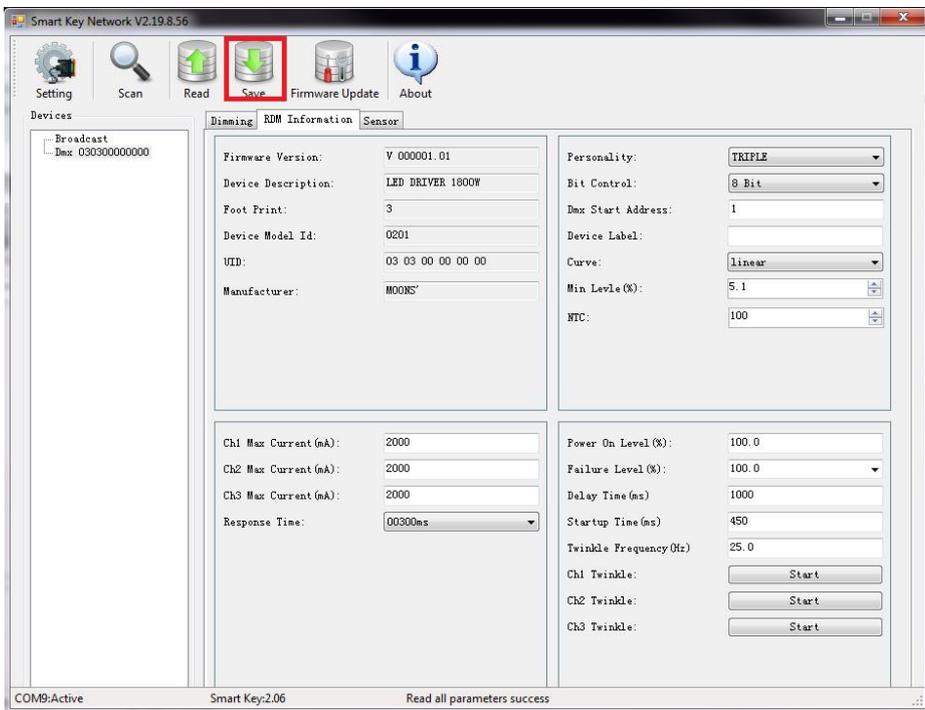

Triple: three output channels occupy three DMX address.

User could click save to save selection.

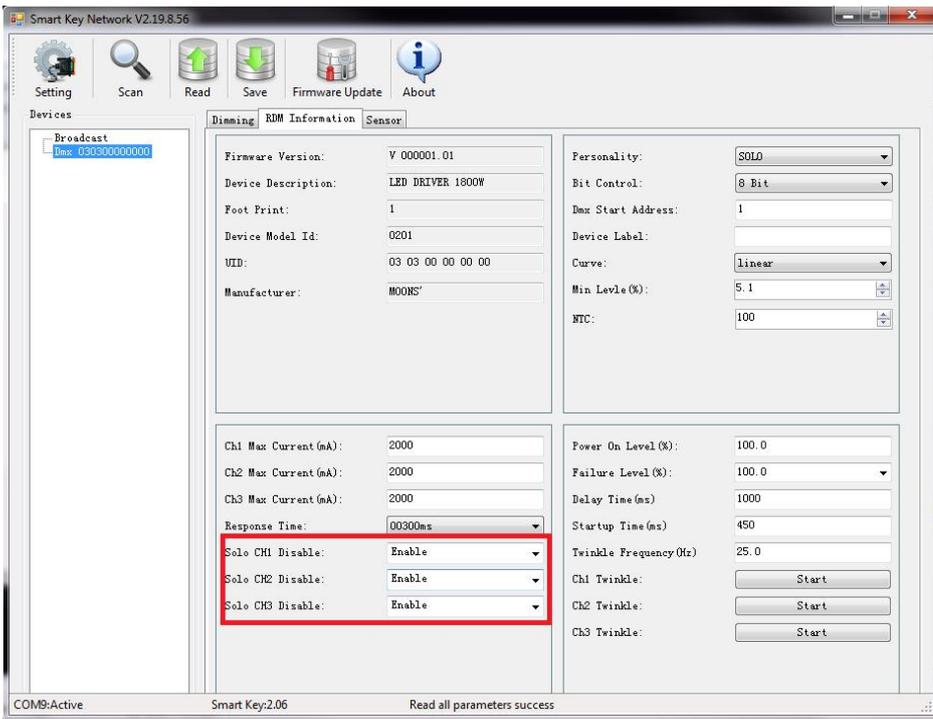

If user modify the address mode, please scan the address again.

After complete modify parameters, click save to save the parameters.

In the solo mode, user can enable or disable each channel.

Bit control

Under Solo mode,

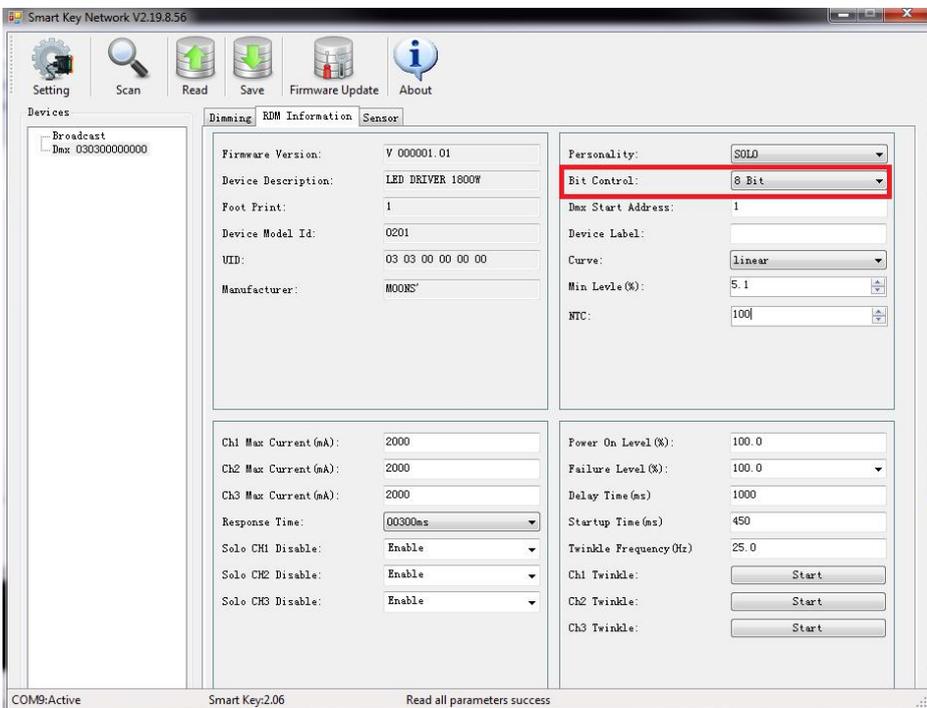

If bit=8, the driver will occupy 1 footprint.

If bit=16, the driver will occupy 2 footprints.

Under Triple mode,

If bit=8, the driver will occupy 3 footprints.

If bit=16, the driver will occupy 6 footprints.

Power on level: the driver's power on output level, if there is no any dimming signal.

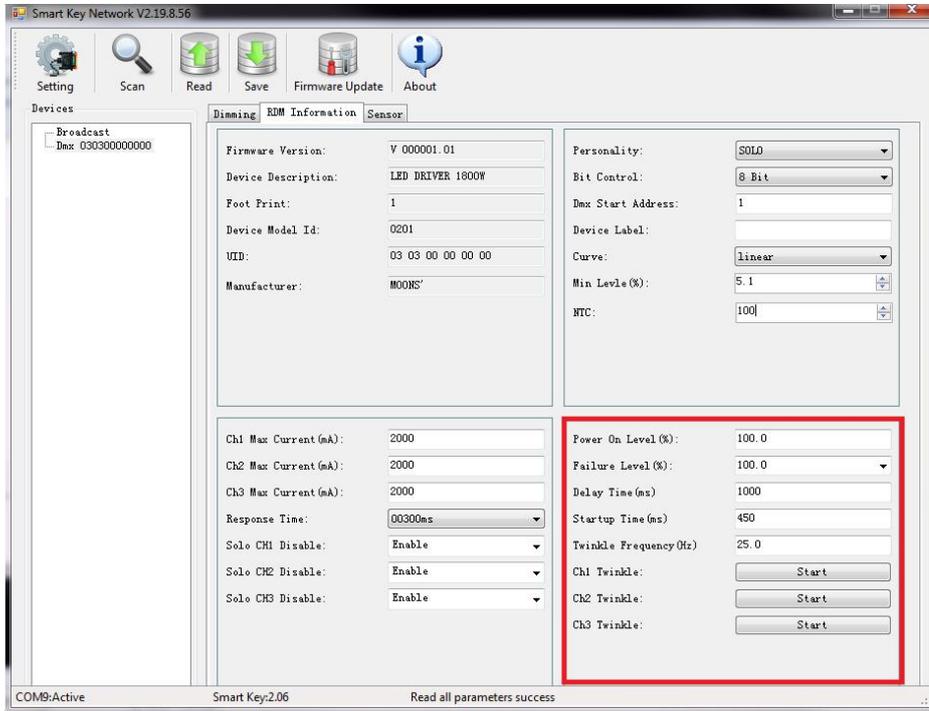

Failure Level: when signal is lost, the driver will access to this level output.

Delay Times: after this time, driver will access to failure level.

Start Up Time: the driver will cost this time to output current.

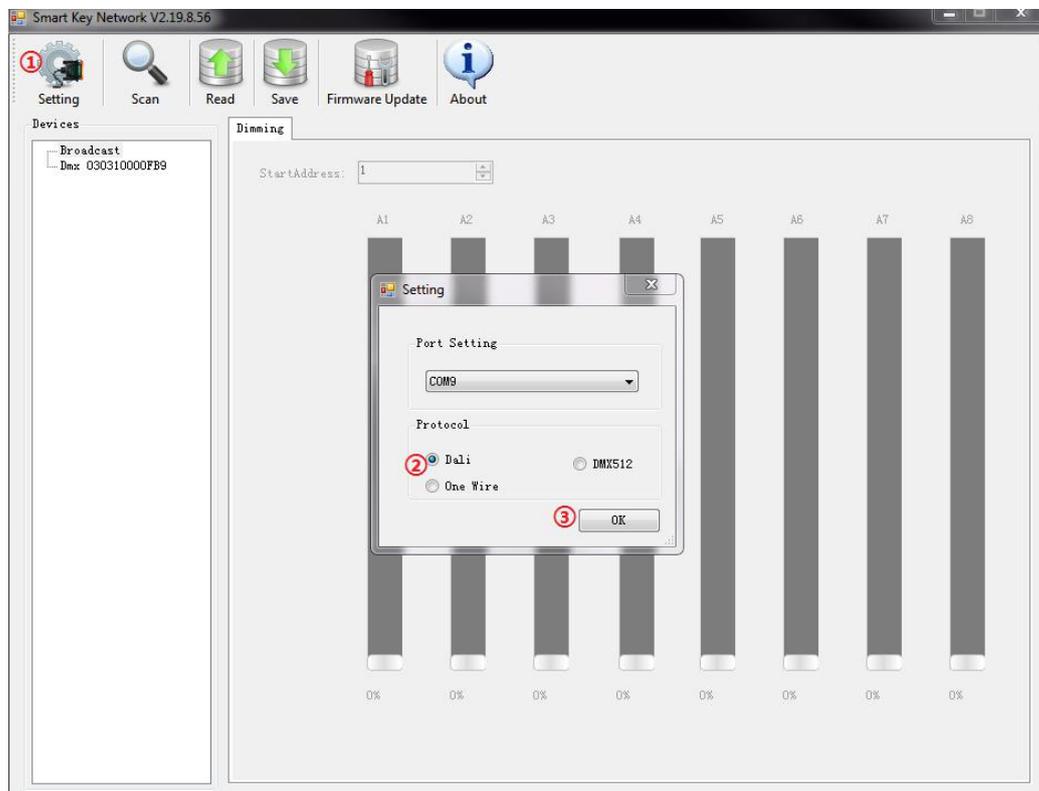

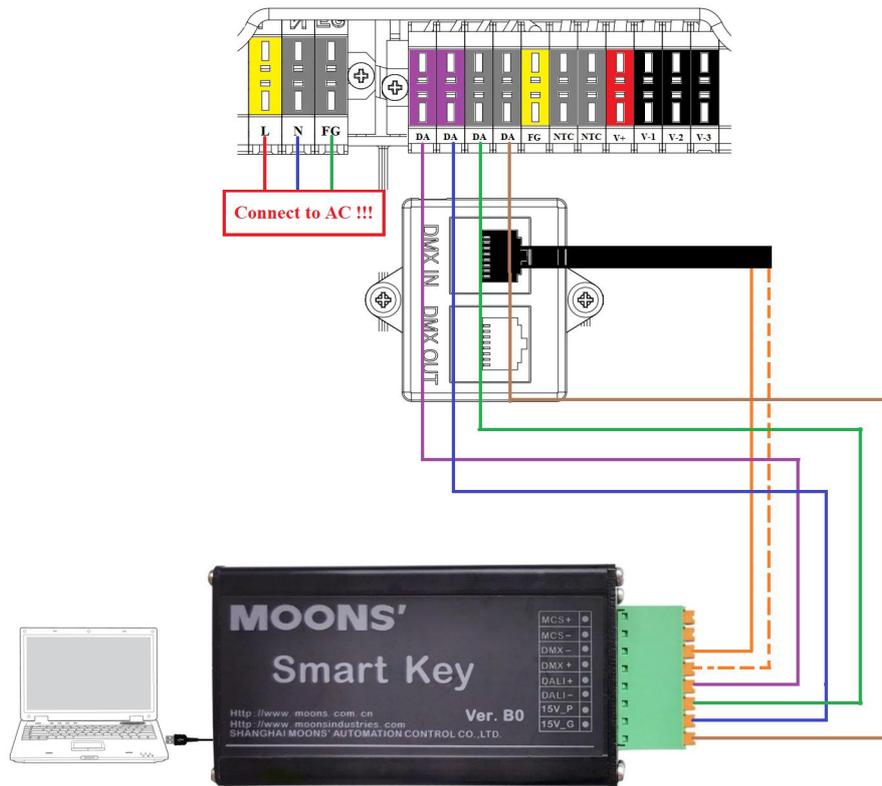

Twinkle Frequency: define the twinkle frequency, if value is 25, on-off cycle per 0.04s

Click start, the corresponding channel will act Twinkle.

4. Switch DMX mode to DALI mode

Still keep below wiring, and in the software, choose “Setting” → “In the Protocol, choose DALI” → “OK”
→ Power off the driver → wait 10 seconds → Power on the driver → Program driver under DALI mode.

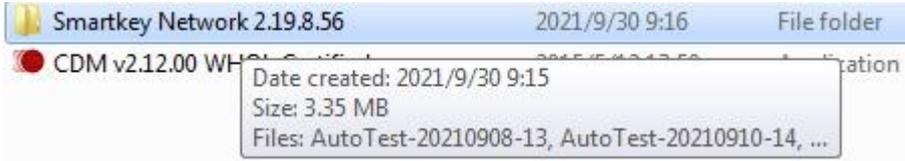

If want to switch DALI to DMX, Still keep below wiring, and in the software, choose “Setting” → “In the Protocol, choose DMX” → “OK” → Power off the driver → wait 10 seconds → Power on the driver → Program driver under DMX mode.

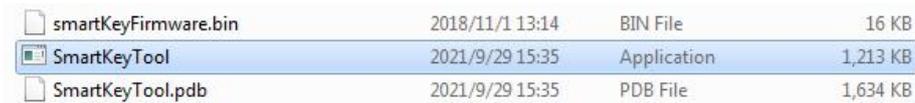

5. As DALI driver

DALI programming interface, explanation and program driver under DALI mode

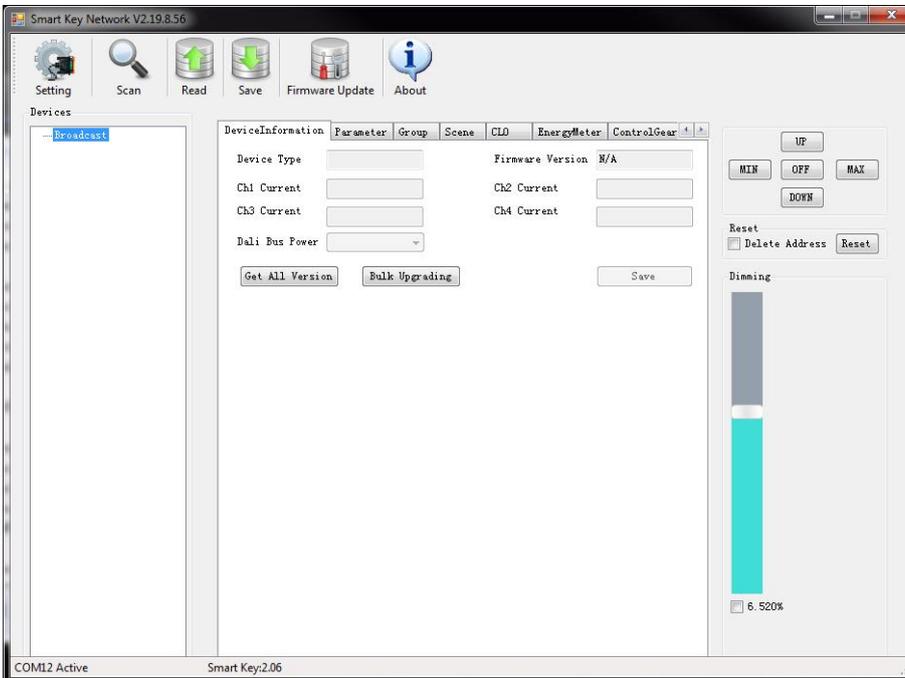

Operate the software directly.
